

# TETLA SEPTARIANS

195 So. Center • Orderville, Utah 84758 • 801-648-2310  
Sept 21, 1990

Dear Mr. Shepard,

Could you give me some additional information as to the exact location of the areas you speak of in the enclosed letter? Which of our mineral leases does it come under? Is it in the Muddy or Deer Hollow area? If the Muddy is it the west or Broad Hollow area or to the east side? In all but one small area all our digging is an on-going thing where we will be doing more mining making complete restoration impossible at present. In the left fork of Broad Hollow, I had just prior to your inspection, started to do some basic leveling. I had only worked a couple of days and the entire leveling prior to any contouring or windrows or seeding will take three or four weeks. In any case this will also be for the most part temporary as we intend to mine more in the area. We have two separate bonds covering the two areas that have mineral leases and have not worked out side of those areas.

I will be working during the coming week in that area if you could possibly come back. Any suggestions on how to better do this work will be appreciated.

Sincerely,

  
Gerald W. Berry
